## **Colrain to the Max**

Colrain's load restraint range is a key component of its comprehensive product range. Since returning to Colrain, Peter Mancino has been working on a wide and diverse range of new Maxus products for OEM's, major fleets and owner operators.

*"These products will be second to none in displaying innovative engineering, quality design, safety and affordability – all cornerstones to developing a new product range for the Maxus brand," Peter says. "We believe this new range will further cement the already recognisable Maxus brand in the industry."*

Colrain stocks a wide variety of transport webbing replacement straps, whether you're after a 50mm, 75mm or 100mm strap, and all are available in a wide variety of lengths: 7, 9, 10, 11 and 12 metres.

*"From the industry standard 50 mm x 9m LC 2,500kg strap to the 100mm x 9m LC 5,000kg, Colrain can supply your every requirement. All slide and clip on winches are double boss and available bare or complete with 9 or 11 metre straps," says Peter.*

*"Colrain's stock holding, location and people equate to an easy transaction when doing business. Our clients' needs and desires are paramount in providing a superior service."* Other restraints available from Colrain include:

- Gate winches in both bolt-on and weld on formats, either bare or with four or five metre straps with hook or keeper configuration.
- Winch track available in 4 mm x 3 m lengths (a 5mm primed winch track is also available).
- A complete range of 50mm hand ratchet straps, available in 9, 11 and 12 metre lengths, rated at LC 2,500 kg, complementing the smaller 25mm and 35mm hand ratchet straps.

Understanding the importance of health and safety, Colrain will commence stocking the ergonomic reverse action range of hand ratchet strap units. This model uses the reverse action to that of a standard ratchet strap, placing less stress on the operator's arms and shoulders, which makes it ideal for those making multiple drops.

Pallet angles are available in a wide variety of lengths, colours and thickness. Embossed grooves are the main feature of the one metre orange angle. Colrain manufactures these locally and can brand company names or logos into the pallet angle. Hardened engineered red ribbed chain angles complete the range.

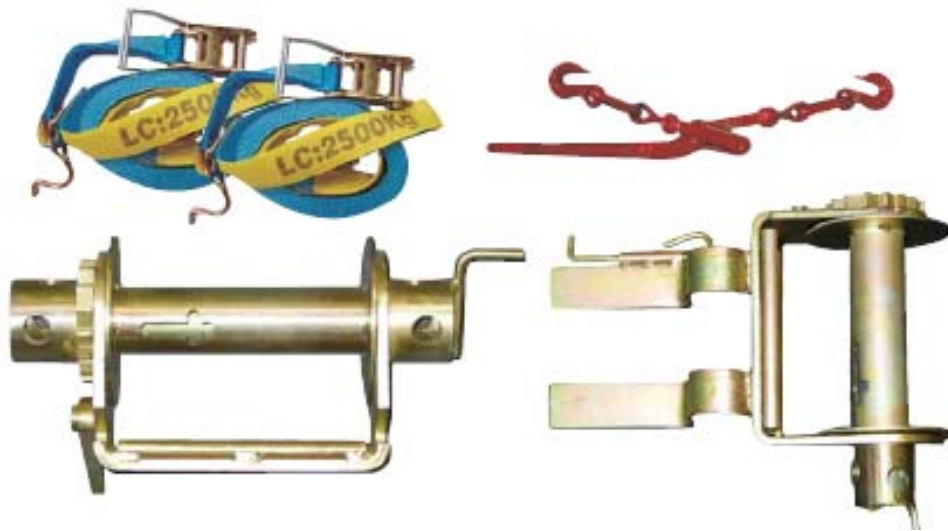

## **The Chain Gang**

Colrain also stocks a wide variety of Grade 70 transport chain. Previously offering the briefcase packaged chain kits, Colrain has moved back to the traditional bucket design. *"The bucket allows for clear, colourful branding, with safety weights and Australian standards instantly recognised in this package,"* adds Peter.

Chain kits are available in 8mm x 9 m lengths, 7.3 mm x 9 m lengths and 10 mm x 9m lengths. Winged clevis grab hooks are also available as a spare part: transport dogs, 8–10 mm in both the normal and ratchet styles, included.

As well, Colrain stocks the Series 2 Ausbinder, an approved restraint product by Bluescope Steel. Conforming to the Australian standard, the Ausbinder has multiple purposes, is ergonomically designed, and has a high pretension force and 1/8 chain length adjustment.

*"I think Colrain's load restraint product range is one of the best kept secrets in the industry. Having just returned to Colrain, even I was surprised at what is available and with some exciting new products in development I don't think it will be long before people have Colrain as their first stop for everything load restraint related,"* says Peter.
