## **MaxiTRANS Show Preview – Queensland Truck and Machinery Show**

### **Freighter**

In a challenging market where transport companies are seeking to gain every possible advantage in both efficiency and safety, Freighter's patented Load Hold curtain trailer will use the Queensland Truck and Machinery Show to demonstrate key operator advantages and benefits when the need for conventional gates are eliminated.

The Drop Deck Load Hold trailer that will be on display will also represent an important milestone in Australia's transport industry; the manufacture of Freighter's 70,000<sup>th</sup> trailer!

And like the 69,999 trailers built before it, this trailer has been designed and constructed to perfectly complement the varying requirements of the operator, in this case Deluxe Freight Systems based in their new premises in Richlands, Queensland.

Also on display will be Freighter's revolutionary EziLiner. Launched over 18 months ago, EziLiner sales are growing strongly as both operators and customers familiarise themselves with the many advantages and benefits that the EziLiner will provide their business, including up to 25% efficiency gains on multiple drop routes.

The EziLiner's design replaces traditional methods of buckles and straps used to tension the curtain vertically. It is semi-automatic and requires a simple flick of a lever to tighten the high tensile cable that runs through a series of specially designed arcs at the bottom of the curtain.

Visitors to the stand will have access to demonstrations of both the EziLiner and Load Hold technologies whilst enjoying complementary coffee from the team at Freighter.

## **Maxi-CUBE**

Having led the development of refrigerated transport equipment for over 35 years, attendees at the upcoming QLD Truck & Machinery Show are invited to visit the Maxi-CUBE exhibit to discuss the latest Maxi-CUBE Hi-CUBE Reefer model along with the other enhancements that have been introduced to provide improved operational efficiency and productivity.

With its superior wall panel construction, high performance insulation and aluminium extrusion finish, Maxi-CUBE trailers are universally recognised for their reliability, innovative features and outstanding payload advantages.

The Maxi-CUBE Classic inherits a tradition of class leading van design that goes back to 1972 when the Company was founded. In the intervening years, the Maxi-CUBE brand has continued to lead in the field of van design to be Australia's most popular van.

Visitors will be able to view the unit's versatility to maximise interior load space and minimise tare weight, delivering the potential for optimal payload and profitability on every run.

Operators can also learn how Maxi-CUBE can assist them to customise and ensure that with each trailer built meets both general and specific food transport safety requirements.

## **Lusty EMS**

The Stag B-Double Tipper, a Multi-Loader and Tip-over Axle trailer that will be on display during the 2009 Queensland Truck and Machinery Show reaffirm the company's position as one of Australia's leading and most versatile tipper trailer manufacturers.

The Stag B-Double tipper is ideally suited to applications requiring a tipper combination with greater payload and provides significantly increased productivity through the unique configuration which allows a high 40 tonne payload on standard B-Double routes and tips without unhitching.

The Multi Loader is a purpose built 19m B-Double offering the versatility of a tipper with the added advantage of side opening doors. Providing a 22 pallet carrying capacity and up to 85 cubic metres volumetric capacity, the Multi Loader B-Double is manufactured with a front mounted hoist to allow a clear internal loading area to maximise all available floor space.

The Aluminium Tip Over Axle on display is a 36ft trailer that has been designed to reduce overall tare weight, providing maximum payload advantages. Tip Over Axle trailers can be purchased as a single trailer or as part of a B-Double combination, and can also be used as part of a Road Train setup.

## **Hamelex White**

Hamelex White will be using the Queensland Truck and Machinery Show to showcase some of its leading solutions which will add value to an operator's business.

To help transport organisations in the grain industry gain that crucial advantage, a Hamelex White B-Double tipper combination will be demonstrated to highlight the ease of operation that allows unloading of the front and rear trailers without unhitching, making it ideal for operations where efficient turnaround is a major requirement.

The unit uses aluminium construction featuring exclusive Hamelex White body extrusions. The inspiring design and engineering will highlight the quality build of the unit.

Also on display will be the Hamelex White steel Side Tipper and Rigid Body and Dog trailer which will communicate to visitors that Hamelex White equipment will stand up to the demanding rigours of haulage that are quite often undertaken in less than ideal conditions.

Importantly, its range of tippers and trailers offers companies durable and reliable service and excellent value, having been built using smarter engineering, advanced materials and the latest manufacturing technologies.

## PEKI

Peki will be using the show as an ideal platform to showcase its experience in providing tailored solutions for transport applications.

The Peki Chiller trailer on display will be an exquisite demonstration of Peki's manufacturing techniques coupled with the use of the highest quality materials.

The unit, designed to keep cargo between 0°C and 4°C, has been built to specific requirements for Tony Lauer Transport, who required a van that would provide thermal efficiency and excellent temperature control – critical elements in produce and grocery transport operations.

As is the case with every show, visitors to the PEKI stand can also enjoy complementary PEKI water to quench their thirst and appreciate the technology on offer from PEKI.
